

HELPFUL HINTS

How to operate MULTI-REEL & COMPACT-REEL

- To unwind: hold Reel (with the open face towards you) by the handle and pull product to retrieve. Do not unwind by the handle.
- To wind: line up opening with rubber guides, place plug in centre, and press product through guides. Hold vertical by the carry handle or stand on its own feet and wind.
- To wind drink water hose: place in a straight line without kinks or twists for easy disbursement of water. If the hose has been in use for some time, you will find that setting the Reel up on its round feet will make it easier to wind the hose into the Reel, by pulling the hose towards you.
- NOTE: All products must be fully unwound before use! Reel can go back into storage compartment while product is in use.
- To store excess hose on connection while camping (eg. when hose is longer then you need): place a nozzle on one end and close it, now add water pressure for the hose to expand. Then lay loose coils under van. Remove nozzle from hose and now attach to vehicle. Add water pressure, or otherwise use as required. The hose also operates beautifully in cold climates.
- NOTE: we also stock adaptors to screw into American fittings.

TROUBLESHOOTING

- Cut hose where damaged. Re-fit snap fitting & tail. Secure with a hose clamp.
- To keep reels turning smoothly rinse off dirt, then lubricate centre and outer rim.
- Spray a lubrication product on to moving parts of Snap Fitting.

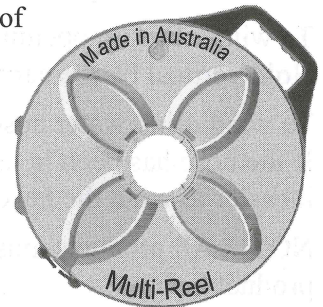

Multi-Reels and Compact-Reels store face to face, so that each handle slips into the opening of the other.
It is ideal for those who need every bit of space.

FACT SHEET

Flat Out International is the producer of the Multi-Reel and the Compact-Reel, as well as flat drink water hoses and flat sullage hoses. Multi-Reel and Compact-Reel have been designed for neat and compact storage. They are manufactured in Australia by qualified and experienced manufacturers, and they have a 3 year warranty.

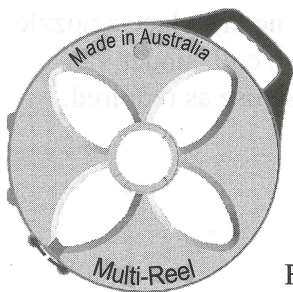

MULTI-REEL (Large)

The Multi-Reel stores 40m of heavy duty power lead, 18m of flat drink water hose or 9m of flat sullage hose. The overall measurement of the Reel, including the handle, is 440mm. The diameter of the reel is 375mm, and the depth is 80mm.

COMPACT-REEL (Small)

The Compact-Reel stores 20m of power lead, 12m of flat drink water hose or 7m of flat sullage hose. The overall measurement of the Reel, including the handle, is 370mm. The diameter of the reel is 300mm, and the depth is 65mm.

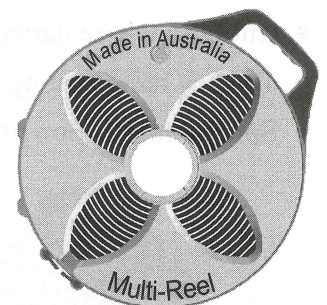

FLAT DRINK WATER HOSE

Our drink water hose is a scaled down fire hose with a food grade liner, guaranteed non tainting, made from 100% polyester (no need to dry). These hoses are available in 12m and 18m lengths. Permanently attached on either end a Snap Fitting and one 1" converter/reducer for the tap (Aust 2 tap sizes catered for). The hose has an internal diameter of 19mm, which provides a high flow. The hose is ideal for connection to caravans and motorhomes using snap-on fittings. Various fittings are available through Flat Out International. Avoid driving over hoses. Sharp objects can puncture!

It is advisable to take pressure off any water hose when unattended.

25mm SULLAGE HOSE

Our unique flat sullage hose is made from vinyl and has a memory providing a flat hose when stored on the Reel, and expanding for the disposal of your grey water when off the Reel. This hose has a 25mm internal diameter and comes supplied with end plugs and a 25mm joiner. If you have a different size outlet you are allowed to plumb your own adaptation. We suggest taking it to the skirt of the van and finishing at a 45° angle - this is the easiest for connection. We also supply an elbow to go over the edge of drain pipe.

32mm SULLAGE HOSE for vans with showers

Larger Diameter Sullage Hose for faster drainage of grey water. This 9m hose has an internal diameter of 32mm! Like the 25mm diameter hose, this product stores flat on the reel, automatically expanding when taken off the reel.

NOTE 1: Sullage hose when new only: lay hose in the sun till oval shape occurs. It is now ready for use.

NOTE 2: Many customers have cut their sullage hose into two lengths. To wind both onto reel, overlap 300mm. To use full hose length, use joiner.

STOCK LIST Large Reels -

Multi-Reel
18m Drinkwater hose & Multi-Reel
25mm ID 9m Sullage hose & Multi-Reel
